

Assignment 1: jQuery Functions

Create a web page that uses the following jQuery functions: **Don't** randomly start writing jQuery and find elements to attach jQuery code to. Think about what each function could be useful for!

Important: Sometimes students spend so much time going through the documentation that it prevents them from actually building things. Skim through the documentation quickly and casually play around to get familiar with only the following jQuery methods.

The wireframe on the below shows only 3 functions being tested. In this assignment, we want you to add more and test all jQuery functions shown below. Submit One .html file included 10 of the below functions of your choice.

- .click
- .hide
- .show
- .toggle

- `.slideDown`
- `.slideUp`
- `.slideToggle`
- `.fadeIn`
- `.fadeOut`
- `.addClass`
- `.before`
- `.after`
- `.append`
- `.html`
- `.attr`
- `.val`
- `.text`
